PROFESSIONAL SUMMARY

Computer Engineering undergraduate at Telkom University with hands-on academic and independent projects across software development, data analytics, hardware design, and IoT-oriented interfaces. Experienced in student organizations, event coordination, public speaking, and collaborative technical learning; interested in exploring multidisciplinary technology roles.

EDUCATION

Telkom University - Bachelor's Degree in Computer Engineering (in progress) **2024 - Present**

SMA Negeri 1 Sukaresmi - Natural Sciences (IPA) **2021 - 2024**

TECHNICAL SKILLS

Programming & Data: Python, Pandas, Matplotlib, data exploration, data visualization, exploratory data analysis (EDA)
Development: React.js (UI prototype), web application development, Visual Studio Code, Kaggle
Technical Exposure: Sensor monitoring, hardware prototyping, Raspberry Pi, YOLO-based object detection, IoT concepts, routing and switching fundamentals
Professional: Event coordination, financial administration, team collaboration, public speaking

TECHNICAL PROJECTS

Traffic Flow & Occupancy Exploratory Data Analysis | Oct 2026 - Present
- Explored characteristics of traffic flow and road occupancy data using Python, examining traffic trends and relationships between variables through visual analysis.
- Created visualizations of traffic patterns and flow-occupancy relationships to inform future forecasting work.

RW Cash Management Website | May 2026
- Developed a web-based project intended to organize and record neighborhood (RW) cash transactions and support more structured financial administration.

MeloVerde - Smart Greenhouse Monitoring Dashboard (UI Prototype) | May 2026
- Implemented a React-based dashboard concept for hydroponic melon monitoring, including sensor indicators, trend charts, historical views, and an architecture overview.
- The current shared code uses demonstration values and simulated readings rather than a confirmed live sensor connection.

YOLO-Based Object Detection on Raspberry Pi - CQUET Competition | Aug 2026
- Participated in a competition team developing an object-detection project using the YOLO method and Raspberry Pi.

Solar-Powered Power Bank Prototype | May 2026
- Developed a portable charging prototype exploring photovoltaic energy as an alternative charging power source.

Water Tank Level Monitoring & Alert System | May 2026

- Developed a monitoring prototype with alerts for empty, full, and overflow water-level conditions.

Gas Leakage Detection System | Dec 2024

- Developed a sensor-based gas leak detection prototype designed to provide early warnings of potentially hazardous conditions.

ORGANIZATIONAL, TECHNICAL & CREATIVE EXPERIENCE

Core Treasurer - Overclock, Department-Level Orientation | 2026

- Served on the core committee with responsibility for supporting financial administration and event budgeting activities.

Public Relations Staff - Centurion, Department Sports Competition | 2026

- Supported communication and outreach activities for a department-level sports event.

Cadre Development Division - Computer Engineering Student Association | 2025 - Present

- Contributed to student development activities and organizational collaboration.

Liaison Officer - PKKMB University Orientation | 2025

- Assisted communication and coordination between new students and event organizers.

EVCON Laboratory - Study Group Participant | 2025

- Participated in collaborative technical study group activities and discussions.

Master of Ceremony (MC) | 2021 - Present

- Hosted events, gaining experience in public speaking and audience communication.

Modeling Activities | 2021 - Present

- Participated in creative modeling activities, developing presentation and adaptability skills.

CERTIFICATIONS

Ruijie - RCNA (Ruijie Certified Network Associate), Routing & Switching
Kaggle - Python Course Certificate
EVCON Laboratory - Study Group Participation / Certificate of Appreciation
